An Open Ended Gold Exchange Traded Fund

New Fund Offer Opens: 28th January, 2010

Closes: 23rd February, 2010

The Lure of Gold

Gold – the shiny yellow metal has held its appeal to humans for ages. Wars have been fought to acquire it and people have devoted their lifetime exploring it during gold rushes. Alchemists have tried converting ordinary lead into the shiny metal and bureaucrats in the past have used it as a currency standard. Kings have issued gold coins to symbolize strength and wealth and gold artefacts have been admired since time immemorial.

“The desire of gold is not for gold. It is for the means of freedom and benefit”

- Ralph Waldo Emerson

Modern society which is exposed to exotic stuff like financial derivatives, collateralized debt obligations, futures, options, structured notes *et al* has managed to keep the fascination with the precious metal alive. Gold as an investment has proven to be the insurance in times of crisis. Even otherwise, the simple tenets of demand and supply warrant that we look at gold as a long term investment option.

What are Gold ETFs?

Gold ETFs - Simply put, these are exchange traded mutual fund schemes that invest in physical gold. Also known as paper gold, these schemes are a convenient and relatively less expensive alternative to owning physical gold. These schemes are designed to seek returns that closely correspond to the returns provided by investment in physical gold.

“When we have gold we are in fear, when we have none we are in danger”

- English Proverb

Why Invest in Gold?

An Effective Portfolio Diversifier

Helps to lower overall portfolio risk and preserve wealth

Gold has a low or negative correlation with most other asset classes, which means that its price changes are independent of price changes in other asset classes like equities or debt. Gold's low correlation with other assets is a function of the unique drivers of demand and supply. Adding gold to the portfolio in small percentages can help reduce overall portfolio volatility.

As an Inflation Hedge

Gold is renowned as a hedge against inflation – as inflation goes up, price of gold also tends to go up along with it. Gold preserves the purchasing power and even increases it gradually. Inflation adjusted gold prices have generated a positive rate of return in the last 7 years.

Investment Objective

To generate returns that closely correspond to the returns provided by investment in physical gold in the domestic market, subject to tracking error.

However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

Asset Allocation Pattern of the Scheme

Type of Instruments	Indicative Allocations (% of Total Assets)		Risk Profile
	Minimum	Maximum	
Physical gold	90	100	Medium
Debt and Money Market Instruments*	0	10	Low to Medium

*Investments in securitized debts can be made by the Scheme upto 10% of the net assets. The Scheme may invest in warehouse receipts and other instrument having golds as underlying and units of international gold linked ETF, as and when permitted by SEBI.

Investment Strategy of the Scheme

The Scheme will be managed passively with investments in physical gold and will endeavor to track the performance and yield of its underlying asset viz gold. Investments in physical gold will be made regardless of any investment merit. The fund intends to follow a fully invested approach and will have a minimum exposure of 90% of its assets in gold and gold bullion at all times. The fund may buy and sell gold at different points of time during the trading session which may or may not correspond to the closing price of gold, maintain cash to meet its liquidity requirement which may result in the Scheme having tracking error and to that extent the performance of the Scheme may not commensurate with the performance of its underlying asset. However, the fund manager will try and minimize the tracking error to the fullest extent possible.

The Scheme may also invest in the instrument having gold as underlying, as and when permitted by SEBI. Warehouse receipts and other permitted securities linked to gold prices and units of International Gold ETF are some of the instruments in which the Scheme may invest as and when permitted by SEBI.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:

- As the Scheme will invest primarily in physical gold, the NAV of the Scheme will react to the price of gold. The price of gold may vary for several reasons and all such fluctuations will result in changes in NAV of the Units under the Scheme. The prices of gold may be affected by several factors such as demand and supply of gold in India and in the global market, change in political, economical environment and government policy, inflation trends, currency exchange rates, interest rates, perceived trends in bullion prices, restrictions on the movement/ trade of gold by RBI, GOI, etc.
- Since there is no exchange for physical gold in India, the Mutual Fund is required to execute its transaction for buy or sell of gold in the open market. This may lead to counter party risks for the Fund.
- The returns from physical gold in which the Scheme invests may under-perform the general securities markets or different asset classes. Different types of securities/ asset class tend to go through cycles of out-performance and under-performance in comparison to the general securities markets.
- The Scheme can sell gold only to bullion banks/trades that are authorized to buy gold. In some circumstances, the Fund may have to resort to distress sale if there is no or low demand for gold to meet its cash requirements or to meet the expenses of the Scheme.
- The Scheme is passively managed scheme. The Scheme’s performance may be affected by a general decline in the price of gold. The Scheme invests in the physical gold regardless of its investment merit. The AMC does not attempt to take defensive positions in declining markets.
- Risks associated with investing in fixed income and money market instruments involve interest - rate risk, credit risk, liquidity or marketability risk, re-investment risk, etc.
- Risk associated with investing in securitised debt involve interest - rate risk, prepayment risk, credit or default risks. Further, Asset Backed Security has structure risk due to a unique characteristic known as early amortization or early payout risk.
- Risks associated with trading of Units on Stock Exchange(s) involve absence of prior active market, trading in Units on Stock Exchange(s) may be halted because of market conditions or for other reasons, the Units of the Scheme may trade above or below their NAV etc.

Risk Mitigation Strategies:

Type of Risk	Measures to mitigate risk
Volatility & Concentration	As the Scheme will invest in physical gold, the volatility and concentration risk are not applicable.
Liquidity	One of the characteristics of gold is that it is an extremely liquid asset. To that extent, the liquidity risk in the Scheme is significantly mitigated.
